

BALANCED AIRE™

SPECIFICATIONS

Balanced Aire mattress comes complete with a waterproof top cover made from a multi-directional stretch Nylon material which is anti-bacterial and anti-microbial.

The base cover utilizes an anti-microbial and anti-static heavy duty PVC material coated with a non skid material to prevent sliding.

The heavy duty foam cavity takes the shape of the cells and increases both edge stability and usable sleeping surface for increased comfort and performance.

The twelve 5.5" tall air cells are made from high strength nylon/polyurethane and are filled with three different tri-laminate foam cores for the right support in the right area.

The addition of a sloped foot section allows for reduced pressure in the heel zone.

Over the air cells are a Visco foam comfort layer and a high density convoluted foam comfort layer .

Easily connects to the alternating pressure controller with quick connections.

Made in the U.S.A.

5 year limited warranty

CONTROLLER

Air output (l/m)	8.0 Liters
Cycle Time (min)	10 min.
Power	120v ac
